- 1) Proposed Curriculum for CSE BTech Program for 2013 Batch onwards
- 2) Proposals for minor changes in existing courses without syllabus changes
- 3) Proposal for four new courses, of which one is completely new and other three are update of existing syllabus and credit structures

1) COMPUTER SCIENCE & ENGINEERING COURSE CURRICULUM FOR THE NEW PROGRAMME (B.Tech) w.e.f. 2013 BATCH

Component	Credits
Basic Sciences	62
Engineering Sciences	29
and Skills	
HSS	12
Institute Electives	12
Departmental courses:	153
Core	117
Electives	36
Total	268

	Semester I	Semester – II														
Course code	Course Name	Cr	Credit Structure			Credit Structure		Credit Structure		Credit Structure	Course Code	Course Name	C	redit S	Structu	ıre
		L	Т	Р	С			L	Т	Р	C					
CH 105	Organic & Inorganic Chemistry	1.5	.5	0	4	BB 101	Biology	3	0	0	6					
CH 107	Physical Chemistry	1.5	.5	0	4	CH 117	Chemistry Lab.	0	0	3	3					
CS 101	Computer Programming and Utilization	2	0	2	6	CS 152	Abstractions and Paradigms in Programming (DIC)	3	0	0	6					
MA 105	Calculus	3	1	0	8	CS 154	Abstractions and Paradigms in Programming Lab	0	0	3	3					
ME 119	Engineering Graphics and Drawing	1	0	3	5	MA 106 And MA 108	Linear Algebra and Ordinary Differential Equations I	3	1	0	8					
PH 107	Quantum Physics and application	2	1	0	6	ME 113	Workshop Practice	0	0	4	4					
PH 117	Physics Lab	0	0	3	3	PH 103	Electricity and Magnetism	3	0	0	6					
Total					36	Total					36					

Semester III							Semester –IV				
Course code	Course Name	Cı	redit S	Structu	ure	Course Code	Course Name	C	redit S	Structi	ure
		L	Т	Р	C			L	Т	Р	C
CS 2XX	Software Systems Lab	1	3	0	8	!CS210	Digital Logic Design	3	0	0	6
CS 207	Discrete Structures	3	0	0	6	!CS288	Digital Logic Design Lab	0	0	3	3
CS 213	Data Structures and Algorithms	3	0	0	6	CS218	Design and Analysis of Algorithms	3	0	0	6
CS 293	Data Structures and Algorithms Lab	0	0	3	3	CS 2XX	Logic for Computer Science	3	0	0	6
*CS 2XX	Data Analysis and Interpretation	3	0	0	6	CS 348	Computer Networks	3	0	0	6
EE 101	Introduction to Electrical and Electronic Circuits	3	1	0	8	CS 378	Computer Networks Lab	0	0	3	3
						*HS 101	Economics	3	0	0	6
Total					37	Total					36

*: The placement shown assumes that HS101 will be offered in 4th semester also. If it is offered in 3rd semester only then it will be swapped with the corresponding CS course.

!: Current name for these course is Logic Design and Logic Design Lab. A proposal has been made for the name change.

	Semester V						Semester –VI					
Course code	Course Name	Cı	redit S	Struct	ure	Course Code	Course Name	C	redit	Struct	ure	
		L	Т	Р	C			L	Т	Р	C

2) Proposals for minor changes in existing courses without syllabus changes:

2.a. It is proposed to change the name of CS $210 - \text{`Logic Design' to `Digital Logic Design' to better reflect the course contents and to distinguish it from 'Mathematical Logic'.$

2.b. It is proposed to change the names of CS288 – 'Logic Design Lab' to 'Digital Logic Design Lab'.

2.c. It is proposed that the credit structure for CS 377 (OS lab) should be changed to 0-1-2-4, from the current 0-0-3-3. That is, the overall number of contact hours remains the same, but one contact hour is deemed as a tutorial hour, requiring student effort beyond the contact hour.

2.d. It is proposed that the credit structure for CS 306 (PL lab) should be changed to 0-1-2-4, from the current 0-0-3-3. That is, the overall number of contact hours remains the same, but one contact hour is deemed as a tutorial hour, requiring student effort beyond the contact hour.

3). Proposal for four new courses, of which one is completely new and other three are update of existing syllabus and credit structure.

2.c). Proposal for credit-structure change to CS377 (Operating Systems Lab)

Name of Academic Unit (Department /School/ Centre/ ID Group) : CSE

Preamble to the proposal (optional) : Change of credit structure to existing course, without any change in syllabus.

Level : Undergraduate

i	Title of the course	CS377 Operating Systems Lab
ii	Credit Structure (L-T-P-C)	0-1-2-4 (old: 0-0-3-3)
iii	Type of Course	UG Core
	(Institute/ Departmental)	
	+ (Core/ Elective/)	
iv	Semester in which normally to be offered (Autumn/Spring)	Autumn
V	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	CS293, CS296
vii	Course Content *	Experiments for acquiring skill in writing concurrent programs. Use of operating system tools. Experiments with MINIX O.S.
viii	Texts/References **	
ix	Name(s) of Instructor(s) ***	Varsha Apte, Dhamdhere, Umesh Bellur
х	Name(s) of other Departments/ Academic Units to whom the course is relevant	3
xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are equivalent to this course? If so, please give details.	No (this is a credit structure change for the same lab).
xii	Justification/ Need for introducing the course	It is proposed that the credit structure for CS 377 (OS lab) should be changed to 0-1-2-4, from the current 0-0- 3-3. That is, the overall number of contact hours remains the same, but one contact hour is deemed as a tutorial hour, requiring student effort beyond the contact hour. This would be an accurate reflection of student effort in this course.

2.d). Proposal for credit-structure change to CS306 (Implementation of Programming Languages Lab)

Name of Academic Unit (Department /School/ Centre/ ID Group) : CSE

Preamble to the proposal (optional) : Change of credit structure to existing course, without any change in syllabus.

Level : Undergraduate

i	Title of the course	CS306 (Implementation of Programming Languages Lab)
ii	Credit Structure (L-T-P-C)	0-1-2-4 (old: 0-0-3-3)
iii	Type of Course (Institute/ Departmental) + (Core/ Elective/)	UG Core
iv	Semester in which normally to be offered (Autumn/Spring)	Spring
v	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	CS154, CS293, CS296
vii	Course Content *	Design and implementation of a compiler for a sufficiently rich subset of a real programming language. The compiler will be automatically generated through use of tools such as LEX and YACC.
viii	Texts/References **	1.Levine, J.R., T. Mason and D. Brown (1990): Lex and Yacc, edition, O'Reilly & Associates, Sebastopol.
ix	Name(s) of Instructor(s) ***	Uday Khedker, Supratim Biswas, Amitabha Sanyal
х	Name(s) of other Departments/ Academic Units to whom the course is relevant	
xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are equivalent to this course? If so, please give details.	No (this is a credit structure change for the same lab).
xii	Justification/ Need for introducing the course	It is proposed that the credit structure for CS 306 (PL lab) should be changed to 0-1-2-4, from the current 0-0-3-3. That is, the overall number of contact hours remains the same, but one contact hour is deemed as a tutorial hour, requiring student effort beyond the contact hour. This would be an accurate reflection of student effort in this course.

3.a). Proposal for a 8 credit Software Systems Lab

Name of Academic Unit (Department /School/ Centre/ ID Group) : CSE

Preamble to the proposal (optional) : 2nd year core course. Should have 2xx number.

Level : Undergraduate

i	Title of the course	Software Systems Lab
ii	Credit Structure (L-T-P-C)	1-3-0-8
iii	Type of Course	UG Core
	(Institute/ Departmental)	
	+ (Core/ Elective/)	
iv	Semester in which normally to be offered (Autumn/Spring)	Autumn
v	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	CS101
vii	Course Content *	1. Vim/emacs HTML, CSS
		 Report and presentation software: latex, beamer, drawing software (e.g. inkscape, xfig, open- office)
		 IDE (e.g. eclipse, netbeans), code reading, debugging Basic Java Java collections, interfaces
		4. Java threads Java GUI Introduction to documentation: e.g. doxygen/javadocs
		5. Version management: SVN/Git
		6. Unix basics: shell, file system, permissions, process hierarchy, process monitoring, ssh, rsync
		7. Unix tools: e.g. awk, sed, grep, find, head, tail, tar, cut, sort
		8. Bash scripting: I/O redirection, pipes
		9. Python programming
		10. Makefile, libraries and linking
		11. Graph plotting software (e.g., gnuplot)
		12. Profiling tools (e.g., gprof, prof)

		13. Optional topics (may be specific to individual students' projects): intro to sockets, basic SQL for data storage, JDBC/pygresql
		A project would be included which touches upon many of the above topics, helping students see the connect across seemingly disparate topics. The project is also expected to be a significant load: 20-30 hours of work.
viii	Texts/References **	Online tutorials for HTML/CSS, Inkscape, OODraw Unix Man Pages for all unix tools, Advanced Bash Scripting Guide from the Linux Documentation Project (<u>www.tldp.org</u>) The Python Tutorial Online Book (http://docs.python.org/3/tutorial/index.html) The Java Tutorials (http://docs.oracle.com/javase/tutorial/) Latex - A document preparation system, Leslie Lamport, 2/e, Addison-Wesley, 1994
ix	Name(s) of Instructor(s) ***	Bhaskaran Raman, Parag Chaudhuri
Х	Name(s) of other Departments/ Academic Units to whom the course is relevant	3
xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are equivalent to this course? If so, please give details.	No (this is a replacement for current 6 credit CS 296, which also has the same name, but we would like a fresh number since the credit structure has changed).
xii	Justification/ Need for introducing the course	This is really an update of syllabus and credits of an existing course, but we would like a fresh course number since credits have changed and the old course will run at least one more time.

3.b). Proposals for a new courses 'Data Analysis and Interpretation'

Name of Academic Unit (Department /School/ Centre/ ID Group) : CSE

Preamble to the proposal (optional) : 2nd year core course. Should have 2xx number.

Level : Undergraduate

i	Title of the course	Data Analysis and Interpretation
ii	Credit Structure (L-T-P-C)	3-0-0-6
iii	Type of Course (Institute/ Departmental) + (Core/ Elective/)	UG Core
iv	Semester in which normally to be offered (Autumn/Spring)	Autumn
v	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	CS101
vii	Course Content *	The role of statisitcs. Graphical and numerical methods for describing and summarising data. Probability. Population distributions. Sampling variability and sampling distributions. Estimation using a single sample. Hypothesis testing a single sample. Comparing two populations or treatments. Simple linear regression and correlation. Case studies.
viii	Texts/References **	Introduction to Probability and Statistics for Engineers and Scientists by Sheldon M. Ross, Elsevier, New Delhi, 3rd edition (Indian). Probability, Random Variables and Stochastic processes by Papoulis and Pillai, 4th Edition, Tata McGraw Hill. An Introduction to Probability Theory and Its Applications, Vol. 1, William Feller, 3rd edition, Wiley International
ix	Name(s) of Instructor(s) ***	M. Sohoni, Ganesh R.
х	Name(s) of other Departments/ Academic Units to whom the course is relevant	All. Once it was an institute core course.

xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are equivalent to this course? If so, please give details.	Not unless other departments are choosing to also retain this as a course.
xii	Justification/ Need for introducing the course	Clearly useful since it was once institute core. Data analysis should be useful to all. It is especially relevant for CSE additionally because of relation to machine learning and because it can be intensely computational.

3.c) Proposal for a new course 'Logic for Computer Science':

Name of Academic Unit (Department /School/ Centre/ ID Group) : CSE

Preamble to the proposal (optional) : 2nd year core course. Should have 2xx number.

Level : Undergraduate

i	Title of the course	Logic for Computer Science
ii	Credit Structure (L-T-P-C)	3-0-0-6
iii	Type of Course (Institute/ Departmental) + (Core/ Elective/)	UG Core
iv	Semester in which normally to be offered (Autumn/Spring)	Spring
v	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	CS 101
vii	Course Content *	Propositional logic (Declarative sentences, Natural deduction, Propositional logic as a formal language, Semantics of propositional logic, Normal forms, SAT solvers), Predicate logic (Predicate logic as a formal language, Proof theory of predicate logic, Semantics of predicate logic, Undecidability of predicate logic, Expressiveness of predicate logic), Program correctness (Notion of program correctness, Proof calculus for partial correctness, Proof calculus for total correctness, Proof calculus for total correctness, Programming by contract), Other Applications such as Logic in databases, Logic programming, Puzzle solving, Practice with Verification tools.
viii	Texts/References **	Logic in Computer Science. Huth and Ryan. Cambridge University Press, 2004
ix	Name(s) of Instructor(s) ***	Supratik Chakraborty, Bharat Adsul, Om Damani
х	Name(s) of other Departments/ Academic Units to whom the course is relevant	EE, MA
xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are	No

equivalent to this course? If so, please give details.	
Justification/ Need for introducing the course	A core course in Logic is currently missing.

3.d) Proposal for a new course 'Automata Theory':

Name of Academic Unit (Department /School/ Centre/ ID Group) : CSE

Preamble to the proposal (optional) : 3^{rd} year core course. Should have 3xx number.

Level : Undergraduate

i	Title of the course	Automata Theory
ii	Credit Structure (L-T-P-C)	3-0-0-6
iii	Type of Course (Institute/ Departmental) + (Core/ Elective/)	UG Core
iv	Semester in which normally to be offered (Autumn/Spring)	Spring
v	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	CS 101
vii	Course Content *	Finite state machines (DFA/NFA/epsilon NFAs), regular expressions. Properties of regular languages. My hill-Nerode Theorem. Non- regularity. Push down automata. Properties of context-free languages. Turing machines:Turing hypothesis, Turing computability, Nondeterministic, multi tape and other versions of Turing machines. Church`s thesis, recursively enumerable sets and Turing computability. Universal Turing machines. Unsolvability, The halting problem, partial solvability, Turing enumerability, acceptability and decidability, unsolvable problems about Turing Machines. Post`s correspondence problem.
viii	Texts/References **	 Introduction to Automata Theory, Languages and Computation, by John. E. Hopcroft, Rajeev Motwani, J. D. Ullman, published by Pearson Education Asia, 2006. Elements of the Theory of Computation, by H.R. Lewis and C.H.Papadimitrou, published by Prentice Hall Inc, 1981.
ix	Name(s) of Instructor(s) ***	Supratik Chakraborty, Bharat Adsul, Krishna Narayanan

х	Name(s) of other Departments/ Academic Units to whom the course is relevant	
xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are equivalent to this course? If so, please give details.	CS 208, 'Automata Theory and Logic'. Content of this course are being slightly changed as per new curriculum.
xii	Justification/ Need for introducing the course	A new core course in Logic is being proposed. Hence the Logic portion of the previous CS 208 will be covered in new logic course and old course should just cover 'Automata Theory'.
