|  |  |  |  |  |  | Hrs | Marks |
| 2K6CS 401 | Engineering Mathematics III | 3 | 1 | - | 50 | 3 | 100 |
| 2K6CS 402 | Data Structures \& Algorithms | 3 | 1 | - | 50 | 3 | 100 |
| 2K6CS 403 | Systems Programming | 3 | 1 | - | 50 | 3 | 100 |
| 2K6CS 404 | Microprocessors \& Microcontrollers | 3 | 1 | - | 50 | 3 | 100 |
| 2K6CS 405 | Computer Organization \& Design | 3 | 1 | - | 50 | 3 | 100 |
| 2K6CS 406 | Electric Circuits \& Systems | 3 | 1 | - | 50 | 3 | 100 |
| 2K6CS 407(P) | Data Structures Lab | - | - | 3 | 50 | 3 | 100 |
| 2K6CS 408(P) | Hardware Lab | - | - | 3 | 50 | 3 | 100 |
|  | TOTAL | $\mathbf{1 8}$ | $\mathbf{6}$ | $\mathbf{6}$ | $\mathbf{4 0 0}$ | - | $\mathbf{8 0 0}$ |

## 2K6 CS 301 : ENGINEERING MATHEMATICS II

## 3 hours lecture and 1 hour tutorial per week

## Module I:

Infinite Series: Convergence and divergence of infinite series - Ratio test - Comparison test - Raabe's test - Root test - Series of positive and negative terms- absolute convergence - Test for alternating series. Power Series: Interval of convergence - Taylors and Maclaurins series representation of functions - Leibnitz formula for the derivative of the product of two functions - use of Leibnitz formula in the Taylor and Maclaurin expansions

## Module II:

Matrices: Concept of rank of a matrix -echelon and normal forms - System of linear equation consistency - Gauss elimination- Homogeneous liner equations-Fundamental system of solutions- Inverse of a matrix - solution of a system of equations using matrix inversion - eigen values and eigen vectors -Cayley- Hamilton Theorem.

## Module III:

Vector Integral Calculus: Evaluation of line integral, surface integral and volume integrals - Line integrals independent of the path, conservative force fields, scalar potential- Green's theorem- Gauss' divergence theorem-Stoke's theorem (proof of these not required).

## Module IV:

Vector Spaces: subspaces-linear dependence and independence-bases and dimension-linear transformations -sums, products and inverse of linear transformations.

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

[^0]
## 2K6 CS 302 : HUMANITIES

3 hours lecture and 1 hour tutorial per week

## Module I (20 hours)

Functional English Grammar: Sentence Analysis -Basic Patterns -Noun Group, Verbal Group, and Adverbial Group- Tenses - Conditionals - Active and Passive Voice - Reported Speech

## Module II (14 hours)

## Technical Communication

1. Nature, Growing need, and importance of technical communication - technical communication skills listening, speaking, reading, and writing.
2. Barriers to effective communication - improper encoding, bypassing inter- cultural differences etc.
3. Organization in technical communication - spatial, chronological etc.
4. Style in technical communication - objectivity, accuracy, brevity, clarity etc.
5. Technical reports - types and format

Professional Ethics: 1. Ethics in Engineering, copyright - IPR- patents

## .Module III ( 10 hours)

## Humanities, Science and Technology

1. Importance of humanities to technology, Education and Society
2. Relevance of a scientific temper
3. Relation between science, society and culture - the views of modern thinkers
4. The development of science and technology in society - science and technology in ancient Greece and India - the contribution of the Arabs to science and technology - recent advances in Indian science.

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 10 short type questions of 2 marks, from Module 1
Q II - 10 questions of 5 marks, from module II and III for writing short notes with choice to answer any seven
Q III - 2 questions A and B of 15 marks from module I for writing essay with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module II for writing essay with choice to answer any one
Q V - 2 questions A and B of 15 marks from module III for writing essay with choice to answer any one

## 2K6 CS 303 : DISCRETE COMPUTATIONAL STRUCTURES

## 3 hours lecture and 1 hour tutorial per week

## Module I: Logic ( 13 hours)

Prepositional Logic - Logical arguments - Consistency completeness and independence - Formal proofs Natural deduction - Soundness, completeness and compactness theorems - Predicate logic - Completeness Resolution - Unification algorithm

## Module II: Relational structures ( 13 hours)

Sets relations and functions - Pigeonhole principle - Cardinals - Countable and uncountable sets -
Digonalization - Equivalence relations and partitions - Partial order - Lattices and Boolean algebra

## Module III: Group theory ( 13 hours)

Groups and subgroups - Products and quotients - Homomorphism theorems - Cosets and normal subgroups - Lagrange's theorem - Permutation groups - Cayley's theorem - Hamming Codes and Syndrome decoding

## Module IV: Rings and fields ( $\mathbf{1 3}$ hours)

Rings, integral domains and fields - Ideals and quotient rings - Euclidean domains - Polynomial rings and division algorithm - Factorization and unique factorization - Irreducibility - Field properties and extensions - Ruler and compass constructions - Introduction to cyclic codes

## Text books

1. Truss J.K., Discrete Mathematics for Computer Scientists, Addison Wesley (Modules I \& II)
2. Kolman B. \& Busby R.C., Discrete Mathematical Structures for Computer Science, Prentice Hall of India (Modules III \& IV)

## Reference books

1. Liu C.L., Elements of Discrete Mathematics, McGraw Hill
2. Grimaldi P., Discrete \& Combinatorial Mathematics, Addison Wesley
3. Tremblay, J P., Manohar R - Discrete Mathematical Structures to Applications to Computer Science Tata McGraw-Hill

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 304 : COMPUTER PROGRAMMING

3 hours lecture and 1 hour tutorial per week

## Module I ( 15 hours)

Overview of $C-$ Variables, Expressions and assignments, Lexical Elements, Fundamental Data Types, Operators Control Statements - if, switch-case, for , while, do, goto, break, switch Functions- Parameter passing, scope rules, recursion

## Module II (12 hours)

Arrays - One dimensional and Multi Dimensional, Pointer-Linked List, Arrays of Pointers, Dynamic Memory Allocations, Strings - Operations and functions , Bitwise Operators and Enumeration Types, Structures and Unions, Files and File Operations

## Module III (13 hours)

Overview of Java Language- Constants, Variables and Data Types, Operators and Expressions Control Structures - Decision Making, Branching and Looping, Object Oriented Programming - Concept of Classes, Objects and Methods, Benefits Java and OOP- Polymorphism and Overriding of methods, Inheritance

## Module IV (12 hours)

Arrays and Strings, Interfaces, Multiple Inheritance, Packages - Putting Classes together - Managing Errors and Exceptions - Applet Programming and Graphics Programming (Basics only) - Managing Input/Output Files in Java

## Text books

1. Kelley, Al \& Pohl, Ira.,., $A$ Book on C-Programming in $C, 4^{\text {th }}$ Ed,, Pearson Education (Modules I \&II)
2. Balagurusamy E., Programming with Java: A Primer, $3^{\text {rd }}$ Ed., Tata McGraw-Hill (Module III \&IV)

## Reference books

1. Balagurusamy E., Programming in ANSI C, Tata McGraw Hill
2. Eckel, Bruce., Thinking in Java, $2^{\text {nd }}$ Ed, Pearson Education

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 305: SWITCHING THEORY \& LOGIC DESIGN

## 3 hours lecture and 1 hour tutorial per week

## Module I (14 hours)

Number Systems and codes - Boolean algebra - Postulates and theorems - Constants, variables and functions - Switching algebra - Electronic gates and mechanical contacts Boolean functions and logical operations - Normal and canonical forms - Self-dual functions - Logical operations - Karnaugh map Prime cubes - Minimum sum of products and product of sums - Quine-McClusky algorithm

## Module II (13 hours)

Combinational Logic - Analysis and design of combinational logic circuits - Universal property of the NAND and NOR gates - Adders - Parallel adders and look-ahead adders - Comparators - Decoders and encoders - Code conversion - Multiplexers and demultiplexers - Parity generators and checkers - ROMs, PLAs

## Module III (10 hours)

Fault diagnosis and tolerance - Fault classes and models - Fault diagnosis and testing - Test generation Fault table method - Path sensitisation method - Boolean difference method - Fault-tolerance techniques. Programmable logic arrays - PLA minimization - Essential prime cube theorem - PLA folding - Design for testability

## Module IV (15 hours)

Counters and shift registers - SR, JK, D and T flip-flops - Excitation tables - Triggering of flip-flops - Flipflop applications - Latches - Ripple counters - Synchronous counters - Up-down counters - Design of sequential circuits - Counter decoding - Counter applications - Shift registers and their applications - Clock mode sequential machine - State tables and diagrams

## Text books

1. Biswas N.N., Logic Design Theory, Prentice Hall of India (modules I, II \& III)
2. Floyd T.L., Digital Fundamentals, Universal Book Stall (module IV)

Reference books

1. Leach D, Malvino A P \& Saha-Digital Principles and Applications, $6^{\text {th }}$ Ed, Tata McGraw Hill
2. Kohavi Z., Switching \& Finite Automata Theory, Tata McGraw Hill
3. Marcovitz, Alan, Introduction to Logic and Computer Design, Tata McGraw Hill
4. Taub, Herbert. \& Schilling., Digital Integrated Electronics, McGraw Hill

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 306 : ELECTRONIC CIRCUITS \& SYSTEMS

3 hours lecture and 1 hour tutorial per week

## Module I (13 hours)

Diode switch, clipping and clamping circuits - Transistor switch - Bistable multivibrator - Schmitt trigger -
Monostable and astable multivibrator - Miller and bootstrap sweep generators

## Module II (13 hours)

Logic levels - Concepts of SSI, MSI, LSI and VLSI - Logic families: NOT gate, TTL, ECL, CMOS logic Interfacing - Comparison of logic families - TTL and MOS flip-flops

## Module III (13 hours)

Memories: Basic concepts - Read only memories - Programmable ROMs - Static and dynamic random access memories - Memory expansion - Magnetic bubble memories - Magnetic surface storage devices -CD-ROMs - Special memories - Sample and hold circuit - D/A converters - A/D converters - Timing circuits

## Module IV (13 hours)

Communication systems - Need for modulation - External and internal niose - Noise figure definition Amplitude modulation and demodulation - Frequency and phase modulation - Noise and FM - FM demodulation - TRF and superheterodyne receivers - Radiation and propagation of electromagnetic waves

## Text books

1. Millman J. \& Taub H., Pulse, Digital \& Switching Waveforms, McGraw Hill (Module I)
2. Taub H. \& Schilling D., Digital Integrated Electronics, McGraw Hill (Modules II \& III)
3. Kennedy G., Electronic Communication Systems, Tata McGraw Hill (Module IV)

## Reference books

1. Nagarath I.J., Electronics Analog \& Digital, Prentice Hall India
2. Floyd T.L., Digital Fundamentals, Universal Book Stall
3. Schilling D.L. \& Belove C., Electronic Circuits: Discrete \& Integrated, McGraw Hill

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V -2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 307(P) : PROGRAMMING LAB

## 3 hours practicals per week

## Set 1 (3 lab sessions)

C Programming - HCF (Euclid's algorithm) and LCM of given numbers - Conversion of numbers from binary to decimal, hexadecimal, octal and back - Evaluation of functions like $\mathrm{e}^{\mathrm{x}}, \sin x, \cos x$ etc. for a given numerical precision using Taylor's series - String manipulation programs: sub-string search, deletion Lexicographic sorting of a given set of strings - Generation of all permutations of the letters of a given string using recursion

## Set 2 (2 lab sessions)

$C$ Programming - Matrix operations: Programs to find the product of two matrices - Inverse and determinant (using recursion) of a given matrix - Solution to simultaneous linear equations using Jordan elimination. Files: Use of files for storing records with provision for insertion - Deletion, search, sort and update of a record

## Set 3 (2 lab sessions)

$J A V A$ - String handling programs, Implementation of Inheritance, Polymorphism, Overriding and Exceptions

## Set 4 (3 lab sessions)

JAVA- Input/Output File Operations, Applet and Graphic Programming

## Reference books

1. Schildt H., C: The Complete Reference, Tata McGraw Hill
2. Kelley, Al \& Pohl, Ira.,., A Book on C-Programming in C, $4^{\text {th }}$ Ed,, Pearson Education
3. Balagurusamy E., Programming with Java: A Primer, $3^{\text {rd }}$ Ed., Tata McGraw-Hill

| Sessional work assessment |  |
| :--- | :--- |
| Lab practicals \& record |  |
| Test | $=30$ |
| Total marks | $=50$ |

University evaluation will be for 100 marks of which 70 marks are allotted for writing the procedure/formulae/sample calculation details, preparing the circuit diagram/algorithm/flow chart, conduct of experiment, tabulation, plotting of required graphs, results, inference etc., as per the requirement of the lab experiments, 20 marks for the viva-voce and 10 marks for the lab record.
Note: Duly certified lab record must be submitted at the time of examination

## 2K6 CS 308(P) : ELECTRONICS LAB

## 3 hours practicals per week

## Set 1: Circuits

1. Silicon, germanium and Zener diode characteristics
2. Static transistor characteristics in CE and CB configurations
3. Clipping, clamping, differentiating and integrating circuits
4. Series voltage regulator
5. Frequency response of RC coupled amplifier
6. RC phase shift oscillator, UJT relaxation oscillator
7. OPAMP: inverting and non-inverting amplifier, voltage follower

## Set 2: Digital Electronics

1. Verification of truth tables of AND, OR, NOT, NAND, NOR and XOR gates, use for gating digital signals
2. TTL characteristics
3. Verification of the postulates of Boolean algebra and DeMorgan's theorem using logic gates
4. Half and full adders, half and full subtractors
5. Digital comparator, parity generator and checker, and code converter
6. Characteristics and operations of RS, gated RS, D, T, and JK master slave flipflops
7. Multiplexer and demultiplexer using gates
8. Shift register, ring counter, and twisted ring counter
9. Decade counter and variable modulo asynchronous counter
10. Astable multivibrator and Schmitt trigger using gates, Astable and Monostable multivibrator using 555 IC.

## Reference books

1. Bhargava et.al., Basic Electronic Circuits and Linear Circuits, Tata McGraw Hill
2. Boylestead \& Nashelski, Electronic Devices and Circuit Theory, $9^{\text {th }}$ Ed, Pearson/PHI
3. Nagarath J., Electronics Analog \& Digital, Prentice Hall India
4. Millman \& Halkias, Integrated Electronics, Tata McGraw Hill

| Sessional work assessment |  |
| :---: | :---: |
| Lab practicals \& record | $=30$ |
| Test | $=20$ |
| Total marks | $=50$ |

University evaluation will be for 100 marks of which 70 marks are allotted for writing the procedure/formulae/sample calculation details, preparing the circuit diagram/algorithm/flow chart, conduct of experiment, tabulation, plotting of required graphs, results, inference etc., as per the requirement of the lab experiments, 20 marks for the viva-voce and 10 marks for the lab record.
Note: Duly certified lab record must be submitted at the time of examination

# 2K6 CS 401 : ENGINEERING MATHEMATICS III 

3 hours lecture and 1 hour tutorial per week

## Module I: ( 13 hours)

Complex analytic functions and conformal mapping: Complex functions - limits. derivative, analytic function- Cauchy-Riemann equations- elementary complex functions such as powers, exponential function, logarithmic, trigonometric and hyperbolic functions- Conformal mapping - Linear fractional transformations- mapping by elementary functions

## Module II: ( 13 hours)

Complex integration: Line integral, Cauchy's integral theorem - Cauchy's integral formula - Taylor's series, Laurent series - residue theorem - evaluation of real integrals using integration around unit circle, around semicircle, integrating contours having poles on the real axis

## Module III: (13 hours)

Jointly Distributed Random Variables: Joint distribution functions, independent random variables , covariance and variance of sums of random variables, joint probability distribution functions of random variables, conditional probability and conditional expectations. Curve fitting: Method of least squares, correlation and regression, line of regression.

## Module IV: ( 13 hours)

Vibrating strings: One dimensional wave equation - D' Alembert's solution - solution by method of separation of variables One dimensional heat equation - solution of the equation by the method of separation of variable Solutions of Laplace's equation over a rectangular region and a circular region by the method of separation of variable

## Reference books

3. Wylie .C.R. Advanced Engineering Mathematics, Mc Grawhill.
4. B.S. Grewal. Higher Engineering Mathematics, Khanna Publishers.
5. Freund. J.E. Mathematical Statistics, Prentice hall of India.

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I -8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 402 : DATA STRUCTURES \& ALGORITHMS

3 hours lecture and 1 hour tutorial per week

## Module I ( 10 hours)

Review of data types - Scalar types - Primitive types - Enumerated types - Character strings - arrays records - sets - Data abstraction - Complexity of algorithms - Time and space complexity of algorithms using "big oh" notation - Recursion: Recursive algorithms - Analysis of recursive algorithms - Solution of recurrences.

## Module II (13 hours)

Object oriented Programming: Concepts, ADT, Linear Data structures: linked structures-Ordered array, indirect reference, Linked nodes, insertion and deletion in linked lists - Stacks - Queues - Collections -Lists

- Stack and queue implementation using array

## Module III (13 hours)

Non linear structures: -Trees , Binary trees - traversals, Graphs- BFS, DFS, Spanning trees, Shortest path algorithms- Heaps and Priority Queues.

## Module IV (16 hours)

Searching - Sequential search - Binary search - Searching arrays and binary search trees - Hashing Introduction to simple hash functions - resolution of collisions - Sorting: $\mathrm{n}^{2}$ Sorts - Bubble sort - Insertion Sort - Selection sort - NlogN sorts - Quick sort - Heap sort - Merge sort .

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

# 2K6 CS 403 : SYSTEMS PROGRAMMING 

## 3 hours lecture and 1 hour tutorial per week

## Module I (15 hours)

Background - System software machine architecture - The simplified instructional computer - Traditional machines - RISC machines. Assemblers - Basic Assembler functions - Machine dependent and machine independent - Assembler features - Assembler design - Assembler design options - Implementation examples - AIX Assembler

## Module II (13 hours)

Loaders and linkers - Basic loader functions - Machine dependent features - relocation and program linking. Machine independent features - automatic library search, loader features - Loader design options - Linkage editors, Dynamic linking, Boot strap loaders and implementation examples- MS-DOS Linker, Sun OS linker

## Module III (9 hours)

Macro Processors - Basic macro processor functions - Machine-independent macro processor features Macro processor Algorithm and Data structures, Conditional Macro expansion, Recursive Macro expansion, General purpose macroprocessors . implementation examples- MASM Macro processor, ANSI C Macro language

## Module IV ( 15 hours)

Basics of Compilers: Basic compiler functions, different phases of compilers (Introduction only), Interpreters, P- code compilers.
Introduction to Operating systems - Basic principles - Batch processing - Multiprogramming - Timesharing systems and real-time systems - Parallel and distributed systems - Computer system structure - Computer system operation - I/O structure - structure - Storage Hierarchy - Hardware protection - General system architecture - Case Study: General Overview of the UNIX operating system

## Text books

1. Beck L.L., System Software - An introduction to Systems Programming, Addison Wesley (First 3 Modules)
2. Silberschatz, Galvin, Operating system ( $5^{\text {th }}$ edition), Addison Wesley ( $4^{\text {th }}$ Module)
3. Aho, Revi sethi, Compilers Principles, techniques \& Toolss , Pearson edn. ( $4^{\text {th }}$ module)

## Reference books

1. Dhamdhere D.M., Systems Programminmg \& Operating Systems, Tata McGraw Hill
2. Bach M.J., The Design of the Unix Operating System, Prentice Hall India (module IV)
3. Godbole S., Operating Systems, Tata McGraw Hill

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## Module I (15 hours)

Intel 8086 processor - Architecture - Memory addressing - Addressing modes - Instruction set - Assembly language programming - Assemblers - Interrupts - Pin configuration - Timing diagrams - Minimum and maximum mode - Multiprocessor configuration

## Module II (12 hours)

Interfacing - Address decoding - Interfacing chips - Programmable peripheral interface (8255) Programmable communication interface (8251) - Programmable timer (8253) - DMA controller (8259) Programmable interrupt controller (8257) - Keyboard display interface (8279)

## Module III (12 hours)

Introduction to 80386 - Memory management unit - Descriptors, selectors, description tables and TSS Real and protected mode - Memory paging - Special features of the pentium processor - Branch prediction logic - Superscalar architecture

## Module IV (13 hours)

Intel 80196 microcontroller - CPU operation - Memory space - Software overview - Peripheral overview Interrupts - PWM timers - High speed inputs and outputs - Serial port - Special modes of operation

## Text books

1. Hall D.V., Microprocessors \& Interfacing, McGraw Hill
2. Brey B.B., The Intel Microproessors - Architecture, Programming \& Interfacing, Prentice Hall
3. Liu Y.C. \& Gibsen G.A., Microcomputer System: The 8086/8088 Family, Prentice Hall of India
4. Hintz K.J. \& Tabak D., Microcontrollers-Architecture, Implementation \& Programming, McGraw Hill

Reference books

1. Intel Data Book Vol.1, Embedded Microcontrollers and Processors
2. Tribel W.A. \& Singh A., The 8088 and 8086 Microprocessors, McGraw Hill

5. Intel Data Book, EBK 6485 Embedded Microcontrollers Data Book
6. Intel Data Book, EBK 6486 Embedded Applications Book

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |
| Total marks | $=50$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 405 : COMPUTER ORGANISATION \& DESIGN

## 3 hours lecture and 1 hour tutorial per week

## Module I (14 hours)

Computer abstraction and technology: Below your program - Under the covers - Historical perspective Measuring performance - Relating the metrics - evaluating, comparing and summarizing performance Case study: SPEC95 benchmark - Instructions - Operations and operands of the computer hardware Representing instructions - Making decision - Supporting procedures - Beyond numbers - Other styles of addressing - Starting a program - Case study: 80x86 instructions

## Module II ( 12 hours)

Computer arithmetic - Signed and unsigned numbers - Addition and subtraction - Logical operations Constructing an ALU - Multiplication and division - Floating point - Case study: floating point in $80 \times 86$

## Module III (11 hours)

The processor: Building a data path - Simple and multicycle implementations - Microprogramming Exceptions - Case study: Pentium Pro implementation

## Module IV (15 hours)

Memory hierarchy - Caches - Cache performance - Virtual memory - Common framework for memory hierarchies - Case study - Pentium Pro memory hierarchy - Input/output - I/O performance measures Types and characteristics of I/O devices - Buses - Interfaces in I/O devices - Design of an I/O system

## Text book

1. Pattersen D.A. \& Hennesy J.L., Computer Organisation \& Design: The Hardware/ Software Interface, Harcourt Asia

## Reference books

1. Heuring V.P. \& Jordan H.F., Computer System Design \& Architecture, Addison Wesley
2. Hamacher, Vranesic \& Zaky, Computer Organisation, McGraw Hill

## Sessional work assessment

| Assignments | $2 \times 10=20$ |
| :--- | ---: |
| 2 tests | $2 \times 15=30$ |

## University examination pattern

Q I - 8 short type questions of 5 marks, 2 from each module
Q II - 2 questions A and B of 15 marks from module I with choice to answer any one
Q III - 2 questions A and B of 15 marks from module II with choice to answer any one
Q IV - 2 questions A and B of 15 marks from module III with choice to answer any one
Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 406: ELECTRIC CIRCUITS \& SYSTEMS

## 3 hours lecture and 1-hour tutorial per week

## Module I (12 hours)

Network theorems - Kirchoff's current and voltage law-superposition theorem - Thevenin's theorem Norton's theorem - node and mesh analysis, coupled circuits - Definition of graph, cut sets and loops - trees incidence matrix - Applications of graph theoretic methods for the formation of network equations.

## Module II ( 12 hours)

Laplace transform - Application of Laplace transform for the solution of differential equations .Transient analysis of RL, RC and RLC circuits - concept of time constant - Polyphase circuit - 3 phase circuit with balanced and unbalanced loads - star-delta transformation

## Module III (12 hours)

Bridge circuits - Principles of Maxwells bridge - Wiens bridge, Andersons bridge and Scherring bridge Two port networks - Concept of impedance - Admittance and hybrid parameters - Interconnection of two port networks - Driving point and transfer functions.

## Module IV (16 hours)

Introduction to systems - Systems engineering - Block diagram - Transfer function - Poles and zeros Control system characteristics - Dynamic responses - Feedback control - System response - First and second order systems - Frequency response - Stability analysis using frequency response (Bode plot) and using root locus

## Text books

1. Siskind, Electrical Circuits, McGraw Hill

Q V - 2 questions A and B of 15 marks from module IV with choice to answer any one

## 2K6 CS 407(P) : DATA STRUCTURES LAB

## 3 hours practicals per week

1. Stack and Queue: Implementation using arrays and Linked lists
2. Searching Methods: Binary search and Hashing
3. $N^{2}$ algorithms - Bubble sort, Insertion Sort
4. Sorting: Recursive implementation of Quick Sort and Merge Sort
5. Binary Search Tree: Implementation with insertion, deletion and traversal
6. Graph Search Algorithms: DFS and BFS on a connected directed graph
7. Minimal Spanning Tree: Implementation of Kruskal's and Prim's Algorithms
8. Shortest Path Algorithms: Dijkstra and Floyd Warshall Algorithms
9. Applications of Heap: Priority Queue and Heap Sort

## Reference books

1. Cormen T.H., Lieserson C.E. \& Rivest R.L., Introduction to Algorithms, Prentice Hall of India
2. Hubbard J R \& Huray Anita., Data Structures with JAVA - Pearson Education

## Sessional work assessment

| Lab practicals \& record | $=30$ |
| :--- | :--- |
| Test | $=20$ |
| Total marks | $=50$ |

University evaluation will be for 100 marks of which 70 marks are allotted for writing the procedure/formulae/sample calculation details, preparing the circuit diagram/algorithm/flow chart, conduct of experiment, tabulation, plotting of required graphs, results, inference etc., as per the requirement of the lab experiments, 20 marks for the viva-voce and 10 marks for the lab record.
Note: Duly certified lab record must be submitted at the time of examination

## 2K6 CS 408(P) : HARDWARE LAB

## 3 hours practical per week

Lab 1 : Identification of components/cards and PC assembling from components
Lab 2,3 : Assembly language programming
Lab 4 : TSR (Terminate and Stay Resident) Programming
Lab 5 : ADC and DAC interface
Lab 6 : Waveform Generation
Lab 7 : Stepper Motor interface
Lab 8,9 : Parallel Interface: Printer and HEX keyboard.
Lab 10 : Serial Interface: PC to PC serial interface using NULL MODEM.
Lab 11 : Familiarization of Microcontroller Kit
Lab 12 : Interfacing with Microcontroller Kit
