Explanation : The historians have constantly denied the existence of chariot in India before 1500 BCE. A re-examination of the excavation (1920-21 and 1933-34) report of Harappa published by the British Government of India in 1940 reveals that the chariot appears in India at 3000 BCE at Harappa (Vats 1940:452), and may have been made for the first time there itself. Many chariot toys including a covered copper chariot model were found from that date (see figures below). The original uncovered chariot must have been made at least a thousand years earlier. This finding fits well with our date of the Rig-Veda (4,000 BCE; Kazanas:2009), which quite often mentions the chariots. Later another copper chariot from 2300 BCE layer was found from **Daimabad in Maharashtra** (Sali 1986:477-479). After this time, chariot appears in many civilizations simultaneously at about 2000 BCE (Egypt, Mesopotamia, Sintashta etc). The spoked wheel too is attested in the Indus seals.
