TEST IV ENGLISH LANGUAGE

- Q.176-180. Rearrange the following seven sentences (A), (B), (C), (D), (E), (F) and (G) in the proper sequence to form a meaningful paragraph; then answer the questiongiven below them.
 - (A) But seriously, how much would you pay to know what thoughts are swimming around in someone else's head?
 - (B) In most fictional movies thus, the idea of reading minds – of seeing the private intentions of another, and the possibility of intervening in those plans – has always been highly attractive.
 - (C) Such fantastical question have long been the bread and butter of fiction.
- (D) Today, more than four centuries since the phrase, "A penny for your thoughts?", was first recorded inflationary accounting makes that ancient penny worth more than \$40.
- (E) The going rate for a "thought" a probe into the the thinking of another – was once quite a bargain
- (F) And if you could really know their

Bank of Baroda P.O (13-03-2011)

truthfulness	how	much	more	would	you
pav?					

- (G) Even with the sliding value of the dollar, this still seems quite a bargain.
- Q.176. Which of the following should be the **SECOND** sentence after rearrangement? (3) C
 - (1) F (2) D
 - (5) A(4) G
- Q.177. Which of the following should be the **FOURTH** sentence after rearrangement?
 - (1) A (2) B (3) G
 - (4) D (5) F
- Q.178. Which of the following should be the **SIXTH** sentence after rearrangement?
 - (1) E(2) G (3) C
 - (5) A(4) B
- Q.179. Which of the following should be the SEVENTH (Last) sentence after rearrangement?
 - (1) A (2) B(3) F
 - (4) D (5)E
- Q.180. Which of the following should be the **FIRST** sentence after rearrangement?
 - (1) A (2) B(3) C
 - (4) D (5)E
- Q.181-191. In the following passage there are blank, each of which has been numbered.

These numbers are printed below the passage and against each, five words/phrases are suggested, one of which fits the blank appropriately. Find out the appropriate word/phrase in each case.

The economics of owning and running a Ration Shop, the familiar name for the outlets in our Public Distribution System (PDS), are such that under normal business terms, the shop-owner could never make a profit. Yet, (181) the government announces that new permits for ration shops will

be given out, there is frenzy in the market to grab one of these. (182)? The answer is obvious: the business is not for the honest and if one knows the (183), there is a fortune to be made.

What are these tricks of the trade?

- Getting fake names into the user list is the most obvious option; the state seems to be (184) a losing battle against this practice, judging by the endless efforts to weed out bogus ration cards.
- · The next is to get the 'right customers' on the list, not just more customers. These are people who are registered but who do not have any interest in (185) on their entitlements. In a system where caste and income certificates are for sale, it is not (186) to 'produce' these documents for mutual benefit. Receipts are duly made in their names, and the ration thus 'drawn' are (187) off into the open market. The sale price of an item like rice makes clear the (188) economics - it costs Rs 8 in ration shop while in the latter it is Rs 30 or above. There are also customers who would rather exchange their entitlements for hard cash at the beginning of the month.
- As the degradation progresses, the shop keeper, in (189) with the official machinery, manages to withhold effectively the entitlements from even the genuine beneficiaries, and diverts them to the open market. The targeted group is usually not in a position to (190) itself to get its due. And thus one has all the '(191)' of a good PDS business.
- Q.181. (1) Whenever (2) quickly
 - (3) just
- (4) as soon
- (5) time
- Q.182. (1) What Where (3)
- (2) When (4) Why
- (5) How

schools / for a period of a ten days. (D)

No error (E)

Q.211-225. Read the following passage carefully and answer the question given below it.

Certain words/phrases have been printed in **bold** to help you locate them while answering some of the question.

It was in the offing. With shortages mounting across the board for water as they are for energy it was only inevitable that the Central government would be stirred into starding a Bureau of water Efficiency (BWE), much like the Bureau of Energy Efficiency (BEE) that was launched some years ago.

Early reports suggest that the draft norms for various sector consuming water will be created by the BWE soon. The alarm bells have been ringing for some years now. Water availability per capita in India has fallen from about 5 million liters in the 1950s to 1.3 million liters in 2010 – that's staggering 75 per cent drop in 50 years. Nearly 60 per cent of India's aquifers have slumped to critical levels in just the last 15 years. The rate at which borewells are being plunged in every city with no law to ban such extraction, groundwater tables have depleted alarmingly.

The BEE's efforts in the last seven years have only been cosmetic. The bureau has looked at efficiency rating systems for white goods in the domestic sector, and has not paid attention to the massive consumption of energy in metal manufacture, paper, and textiles. These sector are very intense in both energy and water consumption. But very little attention has been paid to the water and energy used per tonne of steel or cement or aluminium that we buy, and without significant changes in these areas, the overall situation is unlikely to change.

Use of water is inextricably interlinked with energy. One does not exist without the other. The BWE

Bank of Baroda P.O (13-03-2011)

should steer clear of the early mistakes of BEE of focusing on the 'softer targets' in the domestic sector. Nearly 80 per cent of fresh water is used by agriculture, with industry coming a close second. The domestic sector's consumption of fresh water is in single digits. So the BWE's priority should be to look at measures that will get farmers and industrialists to follow good practices in water use. Water resources have to be made, by law, an indivisible national assets. The protection and withdrawal of this resource, as well as its sustainable development are of general importance and therefore in the public interest. This will mean that individuals and organizations may own land but not water or the other resources that lie below the first 20 meters of the surface of those lands. Drilling of borewells into such 'national assets' will have to be banned, or at the very least they must be regulated. What would be more sensible for the new water bureau to do would be to look at some of the low-handing fruits that can be plucked, and pretty quickly, with laws that can emanate from the Centre, without the risk of either dilution or inaction from state administrations. The other tactical approach that the BWE can adopt is to devise a policy that addresses the serious water challenge in industry segments across a swathe of companies: this will be easier than taking on the more disparate domestic sector which hurts the water crisis less than industry Implementing a law is more feasible when the concentration is dense and identifiable. Industry offers this advantage more than the domestic or the commercial sector of hotels and offices.

As for agriculture, though the country's water requirement is as high as 80 per cent, the growing of water within the loop in agriculture de-risks the challenge of any perceived deficit. Rice wheat, sugarcane are crops that need water-logging,

which ensures groundwater restoration. Surface water evaporation doesn't amount to any more than 7-8 per cent and only strengthens precipitation and rainfall. Agriculture and water need is not quite as much a threat as industry and domestic sector that account for the rest of the 20 per cent.

The primary challenge in industry and the building sector is that no conscious legal measures have been enacted that stipulate growing your own water' with measures that will 'put all water in a loop' in any residential or commercial building. This involves treating all used water to a grade that it can be 'upcyled' for use in flush tanks and for gardens across all our cities with the polluter owning the responsibility for treating and for reuse. The drop in fresh water demand can be dramatic with such upcycle, reuse, and recycle of treated water. Water by itself in industry and the domestic sector, is not as much a challenge as pollution of water. Not enough measures exist yet to ensure that such polluters shift the water back for reuse. If legislation can ensure that water is treated and reused for specific purposes within industry as well as in the domestic sector, this will make all the difference to the crisis on fresh water.

So is the case in industry, especially in sector like textiles, aluminium and steel. Agriculture offers us the amusing irony of the educated urbanites dependent on cereals like rice and wheat that consume 4000 liters of water for every kg, while the farmer lives on the more nutritious millets that consume less than half the quantity. Sugarcane consumes as much as 12,000 liters of water for a kilo of cane that you buy!

A listing of such correlations of water used by every product that we use in our daily lives will make much sense than any elaborate rating system from the newly formed BWE. Such sensitizing with

Bank of Baroda P.O (13-03-2011)

concerted awareness campaigns that the new Bureau drives will impact the urban consumer more than all the research findings that experts can present. What is important for us is to understand the life-cycle impact in a way that we see the connect between a product that we use and the resources it utilizes up to the point where we bring the visible connect to destruction of natural resources of our ecosystems.

- Q.211. How according to the author, can the bureau sensitize the urban consumer about careful utilization of water?
 - By encouraging them to consume more rice instead of millets daily and thereby reduce the amount of water consumption.
 - (2) By providing them more insight into the water consumption cycle of the textile, aluminium and steel industries.
 - (3) By making the aware of the linkages between water consumption for daily activitie-s and the resource utilization and subsequent ecological destruction associated with it.
 - (4) By publishing research findings of experts in popular media whereby people gain awareness on the impact of water misuse.
 - (5) By conducting elaborate drives which notify the urban population about the penalties levied on misuse of water resources.
- Q.212. Why, according to the author, is the water consumption for agricultural activities the least risky?
 - Proportion of water consumed for agriculture activities is much less as compared to that consumed for

- domestic and industrial purposes.
- (2) Most farmers are aware of the popular methods of water conservation and hence do not allow wastage of water.
- (3) Water is fairly recycled through groundwater restoration due to water-logging and surface water evaporation.
- (4) Farmers in India mostly cultivate crops that require less amount of water.
- (5) None of these
- Q.213. Which of the following is possibly the most appropriate most appropriate title for the passage?
 - (1) Water Challenges in the New Millennium
 - (2) The Bureau of Water Efficiency Vs the Bureau of Energy Efficiency
 - (3) Unchecked Urban Consumption of Water
 - (4) Challenges of the Agriculture Sector and Water Resources
 - (5) The Route to Conservation of Water Resources
- Q.214. What does 'low-handing fruits hat can be plucked, and pretty quickly' mean in the context of the passage?
 - The bureau should employ the cheapest methods possible to effectively control the current situation of improper usage of water resources.
 - (2) The bureau should target the industrial sector as well as the domestic sector to reduce water wastage.
 - (3) The bureau should target the agriculture sector only for producing

Bank of Baroda P.O (13-03-2011)

- quick results in reducing wastage of water.
- (4) The bureau should ensure that all the state officials concerned with the measures are actively involved.
- (5) The bureau should start with adopting measures which are simple to execute and produce immediate results in reducing water wastage.
- Q.215. Which of the following, according to the author, is/are the indication/s of water crises?
 - (A) Many agrarian areas in the country are facing a drought – like situation.
 - (B) Almost three-fifth of the naturally available water has been reduced to a very critical level in a relatively short span of time.
 - (C) There has been a significant drop in the availability of water over the past fifty years
 - (1) Only (B) (2) Only (A) and (C)
 - (3) Only (C)
- (4) Only (B) and (C)
- (5) All (A), (B) and (C)
- Q.216. The author suggest that the Bureau of Water Efficiency devise a strategy or make laws to meet water challenges in the segments rather than the domestic segments because _____
 - The industrial sector is the only one that is in a position to reduce its water consumption by a significant margin.
 - (2) There is comparatively less serious water misuse in the domestic sector.
 - (3) It would be easy to identify the consumption patterns in the industrial sector because of its density and visibility.

- (4) The industrial sector would be capable of paying the fines levied by the Bureau for water misuse whereas the domestic sector would be in no such position.
- (5) The industrial sector would be easier to manage in terms of making them understand the importance of water conservation.
- Q.217. Which of the following, according to the author, is/are the step/s that the Bureau of Water Efficiency can take to ensure proper utilization of water resources?
 - (1) Put in place measures that ensure proper water usage.
 - (2) Concentrate on the water consumption patterns of the domestic sector alone.
 - (3) Monitor carefully the activity of digging borewells.
 - (1) Only (A) and (C)
 - (2) Only (A) and (B) (3) Only (A)
 - (4) Only (B) and (C)
 - (5) Only (A), (B) and (C)
- Q.218. Which of the following is true about the Bureau of Energy Efficiency, in the context of the passage?
 - (A) It failed to pay adequate attention to industries like metal, textiles, etc in terms of energy consumption.
 - (B) It focus on rating systems for efficient use of goods in the domestic sector.
 - (C) It mostly focused on the energy consumption in the domestic sector.
 - (1) Only (A) and (C)
 - (2) Only (A) and (B)
 - (3) Only (A)
 - (4) Only (B) and (C)
 - (5) All (A), (B) and (C)

Bank of Baroda P.O (13-03-2011)

- Q.219-222. Choose the word/group of words which is most similar in meaning to the word/group of words printed in bold as used in the passage.
- Q.219. COSMETIC
 - (1) enhancive
- (2) beauty
- (3) augmentative (4) superficial
